Chronic Early Absence

DEFINITION

Chronic early absence is the percentage of children in kindergarten through third grade (K-3) who were enrolled for at least 90 days and missed 18 days or more of school, including excused and unexcused absences (10% or more of the school year for a 180-day school year).

SIGNIFICANCE

Students who are absent from school miss opportunities to learn and develop the important academic and social-emotional skills and approaches to learning that are part of the K-3 experience and critical for ongoing school success. Children who are chronically absent in kindergarten show lower levels of achievement in math, reading, and general knowledge in first grade. Chronic absence in kindergarten appears to be especially detrimental for poor and Hispanic children. In Rhode Island, children who are chronically absent in kindergarten have lower levels of achievement as far out as the seventh grade and are more than twice as likely to be retained.

More than 3.8 million elementary school students nationwide or 11% of all elementary school students are chronically absent, compared to less than one in 10 (8%) of their higher-income peers. The rate of chronic absence is twice as high for students experiencing homelessness as it is for the general student population. Chronic absenteeism can affect the reading and math outcomes of all students in a class, not just those who are absent, because teachers may backtrack or slow the learning pace to review lessons for students who have missed school.

Young children are chronically absent from school for a variety of reasons. Asthma is one of the leading causes of school absenteeism, accounting for one-third of all absences, but other physical and behavioral health issues, including poor dental health, vision problems, diabetes, obesity, anxiety, and/or depression can also result in chronic absence.

While illness is a leading factor in chronic early absence, chronic absenteeism also can result from poor quality education, ambivalence about or alienation from school, and chaotic school environments, including high rates of teacher turnover or absenteeism, disruptive classrooms, and/or bullying. Unreliable or insufficient transportation, violence at and around school, multiple foster care placements, lack of clean or affordable clothes, and lack of safe and affordable housing are other factors that can lead to chronic absence.

During the 2016-2017 school year, 13% of all Rhode Island children in grades K-3 were chronically absent, and an additional 16% missed 12 to 17 days of school.

Averages for school-wide attendance can mask significant numbers of chronically absent individual students. During the 2016-2017 school year, the average daily attendance rate for K-3 students in Rhode Island’s four core cities was 93%, but 24% of students were chronically absent.

Schools, districts, and the state can nurture a culture of attendance by raising awareness among school and community personnel about the problem of chronic absence, using positive messaging to encourage parents to send their children to school on time and every day in the early grades, and creating attendance teams that regularly review data on student absenteeism and identify and intervene with students with troubling absenteeism patterns.

Thirty-seven states are prioritizing reducing chronic absence by making chronic absence rates a key part of their accountability systems. Rhode Island is including both student and teacher chronic absence rates in its accountability system.

Chronic absence rates are high in kindergarten and then decline before increasing again in middle and high school. During the 2016-2017 school year, 16% of Rhode Island kindergarten students, 14% of first graders, 12% of second graders, and 12% of third graders were chronically absent (i.e., absent 18 days or more), up from 14% of kindergarten students, 11% of first graders, 10% of second graders, and 10% of third graders during the 2015-2016 school year.

During the 2016-2017 school year, 13% of all Rhode Island children in grades K-3 were chronically absent, and an additional 16% missed 12 to 17 days of school.

Averages for school-wide attendance can mask significant numbers of chronically absent individual students. During the 2016-2017 school year, the average daily attendance rate for K-3 students in Rhode Island’s four core cities was 93%, but 24% of students were chronically absent.

### Source of Data for Table/Methodology

Rhode Island Department of Education, 2016-2017 school year.

Attendance rates are calculated by dividing the state-calculated “average days of attendance” by the “average days of membership.”

Chronic absence rates are based on attendance patterns for students who were enrolled in a district for at least 90 days. A total of 3,656 Rhode Island students in grades K-3 were not included in this analysis because they were only enrolled for a short period. The Rhode Island Department of Education excludes these students so that chronic absence issues can be examined separate from student mobility issues. It is likely that more students were excluded from districts with higher student mobility rates.

Core cities are Central Falls, Pawtucket, Providence, and Woonsocket.

*Fewer than 10 students are in this category. Actual numbers are not shown to protect student confidentiality. These students are still counted in district totals and in the four core cities, remainder of the state, and state totals.
