## **Children in Single-Parent Families**

## **DEFINITION**

Children in single-parent families is the percentage of children under age 18 who live in families headed by a person – of any gender – who is unmarried, regardless of whether both parents live in the home but are unmarried or if only one parent lives in the home. These numbers include "own children" defined as never-married, under age 18, and related to the family head by birth, marriage, or adoption.

## **SIGNIFICANCE**

According to the U.S. Census Bureau's American Community Survey, there were 187,032 children living with one or more parents in Rhode Island between 2014 and 2018. Of these, 34% (63,859) were living with an unmarried parent, down from 36% of children between 2009 and 2013.<sup>1,2</sup>

Children living in single-parent families are more likely to live in poverty than children living in two-parent families. Single-parent families have only one potential wage earner, compared with the two potential wage earners in two-parent families.<sup>3,4</sup>

Between 2014 and 2018, 75% of children living in poverty in Rhode Island were living in single-parent families. Children in single-parent families in Rhode Island were more than five times more likely to be living in poverty than those in married-couple families, Between 2014 and 2018 in

Rhode Island, 37% of children in single-parent families lived in poverty, compared to 7% of children in married-couple families.<sup>5</sup>

The financial hardship and time constraints experienced by many single parents explain some of the differences in well-being between the children in singleparent households and those in twoparent households.<sup>6,7</sup> Regardless of parents' race and level of educational attainment, children who reside in singleparent households (whether due to divorce or the parents never having been married) are more likely than their peers to have low academic achievement and low levels of social and emotional wellbeing.<sup>8,9</sup> Compared to children in married families, children in single-parent families are more likely to lack health insurance coverage, drop out of school, disconnect from the labor force, and become teen parents. 10,11 Regardless of whether children grow up with one or two parents, parenting quality is an important predictor of children's well-being.12

Families With Children Under Age 18 and Income Below the Poverty Threshold, by Race & Ethnicity, Rhode Island, 2014-2018

Source: U.S. Census Bureau, American Community Survey, 2014-2018. Tables B17010, B17010A, B17010B, B17010D, B17010F, B17010I. \*Hispanic or Latino may be in any race category.

♦ Hispanic single-parent families in Rhode Island are one and a half times as likely as White single-parent families to live in poverty. Hispanic and Black married-couple families and married-couple families of Some other race are more likely than White and Asian married-couple families in Rhode Island to live in poverty.¹³

## Family Structure and Child Well-Being

- Family structure influences children's social, emotional, and cognitive development. Children living in single-parent households are more likely to face educational challenges and are more likely to live in poverty than children in married-couple families. 14,15
- ◆ Children in the U.S. live in a variety of family structures. Among those who live with at least one of their biological parents, 59% live in families with only biological parent(s) and full sibling(s), and 41% live in families with single parents, stepparents, stepsiblings, and/or half siblings. Family structure varies by education, with one in two children whose parents have a high school diploma or less education and about one in five children with a college-educated parent living in 'complex' families.¹6
- ♦ After increasing for several decades, the proportion of births to unmarried families in the U.S. has leveled off and has been around 40% since 2009.<sup>17,18</sup> Babies born to cohabiting couples comprise 25% of all births and 60% of nonmarital births in the U.S., and they account for nearly the entire increase in nonmarital births.<sup>19</sup>

Children's Living Arrangements, Rhode Island, 2010

### Source of Data for Table/Methodology

U.S. Census Bureau, Census 2010.

The denominator is the number of children under age 18 living in family households according to Census 2010. A family household is defined by the U.S. Census Bureau as consisting of a householder and one or more people living together in the same household who are related to the householder by birth, marriage or adoption – it may include others not related to the householder.

Core cities are Central Falls, Pawtucket, Providence, and Woonsocket.
