

Strengthening Paid Family Leave Will Help Rhode Island Families

FEBRUARY 2019

In 2014, Rhode Island showed its commitment to working families and young children by passing the Temporary Caregiver Insurance (TCI) program into law. This groundbreaking law, combined with the longstanding, first-in-the-nation Temporary Disability Insurance (TDI) law enacted in 1942, helps ensure that working Rhode Islanders do not have to make the impossible choice between bonding with a new child or caring for themselves or their loved ones and maintaining economic stability. Together, these programs have made Rhode Island a national leader in work and family policy, and have given the state a competitive edge for attracting and retaining residents and businesses.

The TCI program has helped tens of thousands of Rhode Islanders care for seriously ill loved ones and bond with their babies in the first months and years of life, when children's brains are forming critical connections that will form the basis for learning for the rest of their lives. In 2017, more than 6,000 claims were approved – about 80 percent to bond with a new child – and the number has grown each year since the program was enacted. Both moms and dads are taking leave: In 2017, men filed about 40 percent of approved child bonding claims, and women filed about 60 percent.¹

But in the years since TCI became law, research and new advances in state paid family and medical leave have shown that TCI and TDI could be working even better for Rhode Island families. **It's time for lawmakers to update TCI and TDI – Rhode Island must not be left behind.**

TCI Provides up to Four Weeks of Leave – Short of What Families Need

How Rhode Island Broke Ground: TCI provides workers up to four weeks of partial wage replacement when they take time away from work to care for a new child or family member with a serious health condition. The program was also the first in the country to ensure that this leave was job-protected, meaning that

workers do not have to worry about losing their jobs because they take leave.

Keeping Rhode Island Competitive: Although TCI was a trailblazer in providing job-protected leave, four weeks is now far below the standard set by the newest paid family and medical leave state laws. Other states provide anywhere from six to twelve weeks of paid family leave, meaning that **TCI provides the shortest leave of any statewide law in the country.**²

Supporting Family Health and Child Development: The four weeks of leave available through TCI fall short of public health or medical guidelines for new parents and many conditions and caregiving needs.

Relationships with parents and other caregivers are critical to a baby’s early development, shaping the architecture of the developing brain.³ Caring, consistent relationships experienced by young children can mitigate the impact of stress and help develop the foundations of a child’s ability to learn, to form positive relationships, and to exercise self-control – and these relationships require time.⁴ Time at home with newborns, infants, and toddlers gives parents the time they need to breastfeed, attend well-child medical visits, and ensure that their children receive all necessary immunizations.⁵ For new parents, public health experts recommend at least twelve weeks, and preferably six months, of leave in order to establish and support breastfeeding, reduce risk of post-partum depression and support strong bonds between children and their parents and caregivers.⁶

Needs vary for other conditions requiring parental or family care, but serious or chronic health conditions may require more than four weeks of leave.⁷ For example, a typical hospital stay for a child with pediatric cancer is about 12 days, and a child may have three to six stays per year.⁸ A parent could quickly exhaust the four weeks of paid caregiving leave available through TCI and face the impossible choice of taking weeks or months away from work without pay, or leaving a child alone in a hospital bed.

TCI Replaces Sixty Percent of Usual Wages – Unaffordable for Many Families and Below Neighbors’ Standards

How Rhode Island Broke Ground: TCI and TDI benefits are approximately 60 percent of an individual’s typical wages, up to a maximum of \$852 per week in 2019.⁹ At the time TCI was passed, these benefit levels were in line with offerings in California and New Jersey – and represented a competitive edge against neighboring states like Massachusetts and New York that had no paid family leave programs.

Keeping Rhode Island Competitive:

This amount is too low for Rhode Island working families, particularly those with low incomes, and is rapidly falling behind the stronger standards being set in neighboring states.

Quite simply, if the amount of income a worker receives when they’re out of work isn’t enough to meet basic expenses, they won’t be able to access the time off a program provides. Research from other longstanding paid family and medical leave programs shows that low-income workers are less likely to take leave through the programs because the wage replacement is too low for them to afford to live on,¹⁰ and low wage replacement is a particular disincentive for fathers.¹¹

A market research study of California’s paid family leave program found that the program’s modest wage replacement (at the time 55 percent) was a factor in people’s decision to apply or not to apply – particularly for low-income workers – and key informants and stakeholders reported that the wage replacement levels were a barrier to participation for low-income households.¹² Additional studies have also found the wage replacement level to be a barrier for take up in California.¹³ In response to these consistent findings, California’s wage replacement rate was increased in 2018 and New Jersey’s was increased in 2019.¹⁴

Recommendations

To help ensure Rhode Island TCI and TDI work well for all families, lawmakers should consider the following updates to the programs, based on improvements that have been tested in other states:

- Extend TCI to cover at least 12 weeks of leave.
- Increase the TCI wage replacement rate so that leave is affordable for low-income workers.
- Fully include families of all kinds by updating the definition of covered family relationships to include extended and “chosen” family members.
