Testimony Re: S2124 Medical Assistance – Perinatal Doula Services

Senate Health & Human Services Committee

February 4, 2020

Katie Orona, Policy Analyst

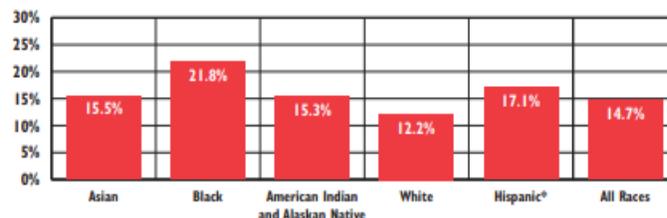

Mr. Chairman and members of the Committee, thank you for the opportunity to provide testimony today. Rhode Island KIDS COUNT would like to voice its strong support for Senate Bill 2124. On Behalf of Rhode Island KIDS COUNT I would like to thank Senator Ana Quezada for her leadership in sponsoring this bill and also thank the co-sponsors; Senators Metts, Valverde, Goodwin, and Nesselbush. This bill would provide medical assistance health care for expectant mothers and establishes medical assistance coverage and reimbursement rates for perinatal doula services. Our support for this legislation reiterates our organization’s strong commitment to address the needs of children and families in Rhode Island with a particular focus on closing racial and ethnic disparities.

Maternal Mortality Crisis Among Black Women

Worldwide, rates of maternal mortality have steadily decreased over time in nearly every developed country. Despite this, rates of maternal mortality in the United States are on the rise and disproportionately impact already vulnerable populations.¹ Evidence clearly demonstrates that women of color are less likely to have access to adequate maternal health care services and more likely to die in pregnancy and childbirth than White women.² Nationally, Black women are three to four times more likely than White women to die of pregnancy-related complications.³ These racial disparities in maternal mortality rates span all levels of education, age, and income.⁴

In Rhode Island, the maternal mortality rate between 2013 and 2017 was 11.2 per 100,000 births.⁵ This statistic masks significant racial and ethnic disparities - between 2013 and 2017, Black women in Rhode Island were nearly twice as likely as White women to receive delayed prenatal care.⁶ Additionally, Black women in Rhode Island are 42% more likely to suffer a severe complication at delivery than White women.⁷

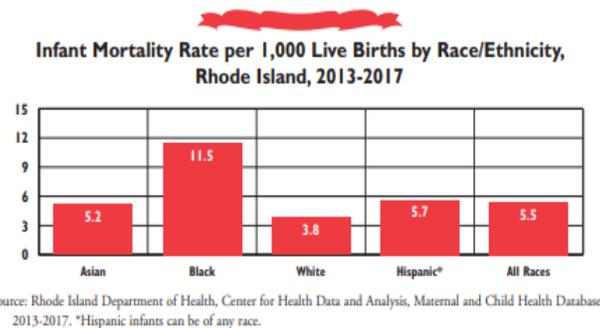

Women With Delayed Prenatal Care by Race/Ethnicity, Rhode Island, 2013-2017

Racial Disparities Among Black Infants

Infant mortality rates are associated with maternal health, quality of and access to medical care, and socioeconomic conditions.¹⁶ While infant mortality has declined nationally across all racial and ethnic groups, stark disparities remain. In Rhode Island between 2013 and 2017, the Black infant mortality rate was 11.5 per 1,000 live births, up from 9.9 deaths per 1,000 births between 2012 and 2016.¹⁷ Simply put, Black infants in Rhode Island die in the first year of life at a rate nearly three times that of White infants. The Black infant mortality rate is the highest of any other racial or ethnic group in the state even after controlling for known risk factors such as socioeconomic status and parental educational attainment.¹⁸

A growing body of evidence indicates that pervasive racial bias against Black women and unequal treatment of Black women in the health care system often results in inadequate treatment for pain.^{8,9} This, coupled with stress from racism and racial discrimination experienced throughout the lifespan, contributes to unacceptable health outcomes among Black women and their infants in Rhode Island.^{10,11}

Doulas as a Key Strategy

Doulas have emerged as a key method of addressing these disparities in maternal and infant morbidity and mortality by delivering a higher quality of culturally appropriate and patient-centered health care for women, particularly those who are low-income women or women of color. A doula is a trained professional who provides physical, emotional, and informational support to mothers before, during, and immediately following childbirth.¹² Support from a doula during labor and delivery is associated with improved health outcomes for both the mother and their baby, including shorter labors, lower cesarean rates, and higher five-minute APGAR scores.^{13,14} Additionally, babies born to mothers who had the support of a doula were less likely to have low birth weight and were more likely to be breastfed than those born to mothers who did not receive doula support.¹⁵

Conclusion

Improving access to doula services is a key strategy to addressing the unacceptable racial and ethnic disparities that exist as it relates to maternal and infant morbidity and mortality. We ask you to support this important bill that would increase access to doula services in Rhode Island and would take a crucial step forward in addressing health equity in communities of color. Mr. Chairman, I would also like to note that this bill is a policy priority of the Right From the Start Campaign, a newly-established early childhood effort led by Rhode Island KIDS COUNT in partnership with five other organizations including Beautiful Beginnings, Economic Progress Institute, Latino Policy Institute, RI Association for Infant Mental Health, and the RI Association for the Education of Young Children.
